78452 - Lexiscan MIBI
78452 - Exercise MIBI
78472 - Cardiac blood pool imaging, single study
78499 - Unlisted cardiovascular procedure
78580 - Pulmonary perfusion imaging, particulate
78709 - Kidney, with vascular flow and function, multiple studies, w/wo pharm intervention

The amount of radiation needed for the exam is minimal and the body eliminates the tracer material typically within twenty-four hours.

Tell the technologist if you have any allergies and if you are undergoing radiation therapy because these factors may require adjustments in how the examination is performed. Also, let the technologist know if you are pregnant or breastfeeding as nuclear medicine tests are usually not recommended for pregnant women.
